Gbenga Oluwadahunsi

Fullstack Developer

SUMMARY

A creative, detail-oriented Fullstack developer with a strong interest in Artificial Intelligence. I have a track record of creating and launching successful frontend and backend web applications.

EXPERIENCE

MLH Global Hack Week 2023

A detailed one-week online event for tech developers where I was able to learn about various open-source projects and how to become a contributor, I also made my first code contribution, It was a time to meet with various techies across the world and learn from the amazing projects they are doing.

Zuri HNGx Internship 2023

One-month internship, as an Intern I learned how to use Firebase for login authentication, use Fetch API to get JSON elements, and display to the end users, I also built a movie rating website. Again, one of the best projects I took part in was building a Google Chrome Extension.

PROJECTS

Knocks

A fullstack web app where users can add notes to a page as regards life lessons not taught in the four walls on conventional school system, toggle the importance of existing note or even decide to delete a note.

Motiva

A web App where you can search for Motivational quotes and create custom designs on shirts or share on social media, this was built using Firebase for login authentication and React.js with other React libraries.

DropImagery

An image gallery website, where you can view and save some amazing images by different photographers; demo login details: user@example.com and 1password, this was built using React.js.

Tasty-Yumzie

Food restaurant web application where customers can book reservations, and order food and drinks. this was built using Vanilla JavaScript.

Haveelah Beauty

A website built for a Makeup and Beauty brand that exists to enhance the inherent beauty of every woman, this was the first commercial website that I built, it was set up with no framework.
